

RISE WITH SAP LICENSING REVIEW

→ RISE right. Reduce license fee exposure with authorisations aligned to usage and security priorities.

Considering the cloud? Start by right-sizing your security model.

RISE with SAP bases license fees on the assigned level of authorisations, not system usage as it was previously. Consequently, companies with excessive authorisations face overinflated licensing costs as well as increased risk and compliance exposures.

Turnkey's Licensing Review examines actual SAP usage to produce a licensing requirements target based on the principle of least privilege. We then identify and support opportunities for role remediation or redesign to help you reduce costs, improve processes, and streamline user experience.

HOW IT WORKS

Applying our proprietary, accelerator-driven methodology, Turnkey will analyse your data to deliver recommendations for optimising your SAP authorisations and license utilisation. You receive:

- Target State License Model based on actual system usage versus role allocation.
- User Analysis identifying discrepancies between assigned and utilised transactions/functions.
- Quick Win Opportunities for user or role-level remediation.
- Role Impact Assessment evaluating roles potentially requiring redesign.
- Roadmap outlining steps to achieve your optimal security and license model.

BENEFITS TO YOUR BUSINESS

Reduce SAP
license fees

Improve process
efficiency

Reduce
compliance risk

Streamline user
experience

Align security to
business goals
