

The Config Team™
SAP Supply Chain Specialists

The Config Team Overview

About The Config Team

We specialise in the design, development, implementation and support of innovative SAP Supply Chain solutions that deliver an integrated end-to-end supply chain process.

What sets us apart is that we only focus on the SAP Supply Chain, meaning our customers benefit from extensive specialised knowledge, experience and innovation.

The leader in our field, we have been implementing SAP Supply Chain solutions for more than 25 years, for global brands across a diverse range of industries.

We adopt a collaborative approach to everything we do. We form true partnerships with our customers, based on honest and open communication, to deliver innovative solutions that make a difference.

SAP Gold Partner

We are an SAP Gold accredited partner, offering the reassurance that SAP trusts us to implement its solutions.

Specialist Expertise

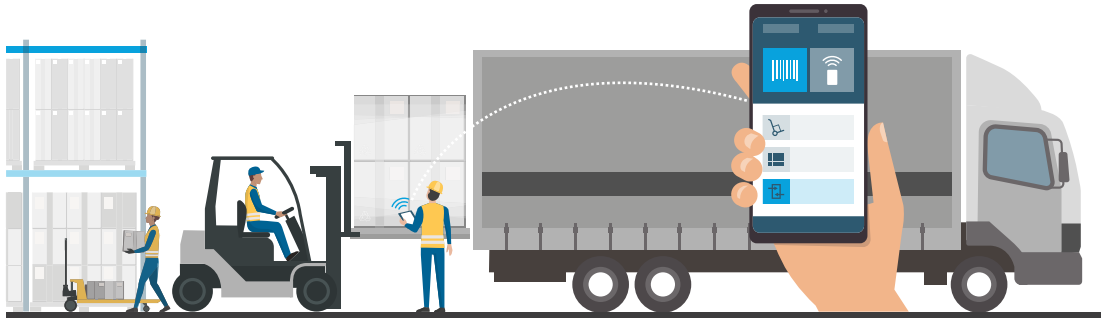

Our collective knowledge and experience of SAP Supply Chain is unrivalled; it is what we know and is what we're passionate about.

Strong Reputation

We have many long-standing customers that have been trusting us with their SAP Supply Chain solutions year after year.

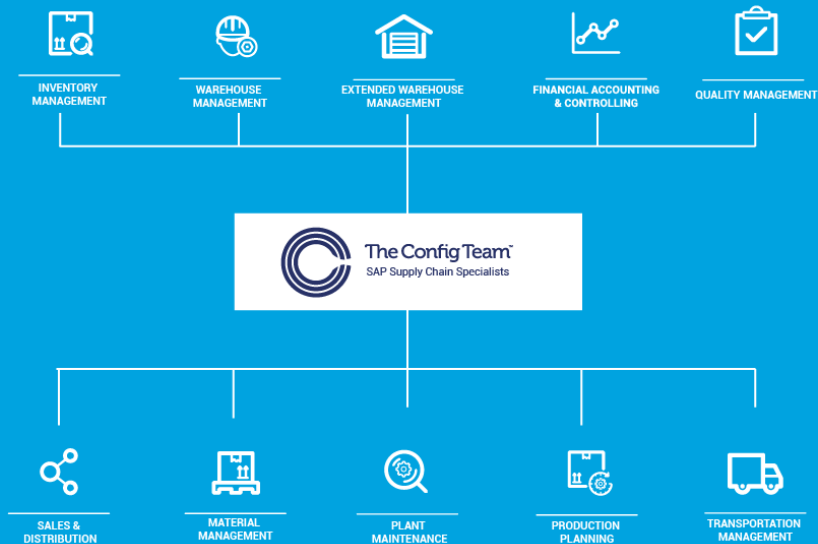

Continuing Innovation

We are continually developing new, innovative solutions that will work with the very latest supply chain advancements and technology.

Our Expertise

Our focus is the SAP supply chain. We have a team of 60+ in house consultants with specialisms within one or a combination of these core modules.

Consultancy

We have a team of more than 60 SAP Supply Chain consultants, who are passionate about working with you to deliver the right solution for your business. It is important to us that we do not just look at your business today, but implement a solution that will also deliver on your long-term business and operational needs.

We can bridge the gap between operations and IT, as many of our consultants are from operational backgrounds so have an in-depth knowledge of operational processes, as well as SAP. We always work together with every customer to define our involvement, which can be purely design through to complete end-to-end implementation, depending on internal resource.

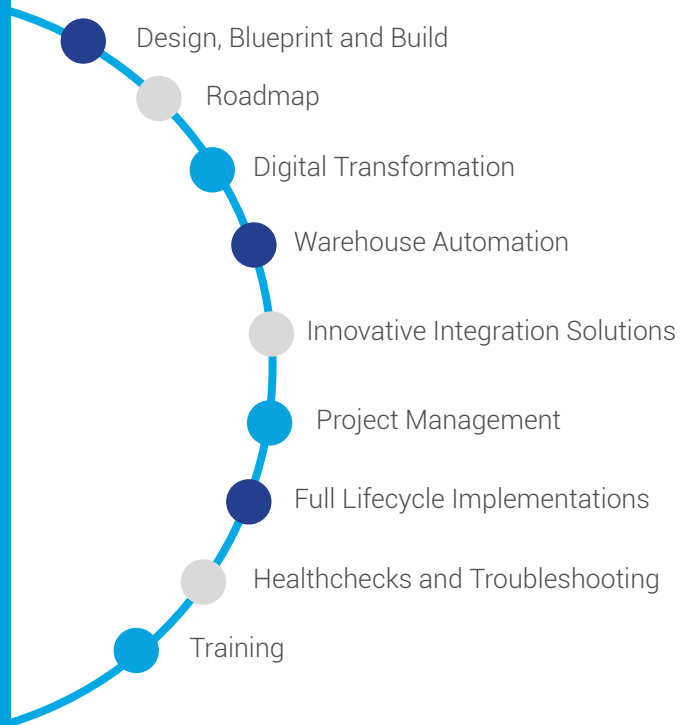

Our consultants have unrivalled knowledge of SAP warehouse management solutions. Whether it is IM, WM, SRM or EWM, we provide advice on how to best utilise the SAP functionality to ensure you realise the value of your SAP investment. With specialist consultants focusing on S/4HANA projects, we have in-depth knowledge of the latest SAP developments.

With a wealth of experience in integrating automated equipment, third party systems, voice-activated technology and RFID with SAP, our consultants deliver intelligent integration solutions every time.

SAP Consultancy Services

Here are just some of the areas within a project that our team can help deliver.

Support

The perfect support partner, we ensure you can maintain efficient supply chain operations by dealing with any updates or issues that arise quickly and efficiently.

We know warehouses, distribution centres and manufacturing facilities are not 9 – 5 businesses, so our support packages are designed to offer complete flexibility, ensuring you can access the help you need, whenever you need it.

Based on an hour bank model, our support contracts are tailored to individual needs, and you can choose the level of support you need, whether that is a full-service contract or simply ad-hoc support.

Our support packages include remote help, onsite assistance and short-term upscaling for small projects, in addition to an online helpdesk, so you can easily track support status from your initial call through to resolution.

Our UK-based team of functional and technical consultants within our support team are in-house and always contactable to discuss new and ongoing tasks.

Support Services

Here are just some of the areas within a project that our team can help deliver.

- Flexible Support Packages
- Support On-site or Remote
- Functional and Technical SAP Experts
- Proactive Knowledge Sharing
- Fast Response Times
- Expertise in various industry sectors
- Performance Healthchecks
- 24 Hours Help Desk System

PreBilt™

With PreBilt, any supply chain process can be executed through a mobile device and integrated directly with SAP in real-time.

PreBilt allows you to update paper-based systems or outdated technology to increase productivity, improve efficiencies and reduce operational costs, all while enhancing the customer experience.

With a comprehensive suite of mobile applications, which have been designed to digitise any supply chain process within warehousing, manufacturing and distribution centres, our mobile solutions can be used from Goods In through to production, storage, picking and packing and finally Goods Out.

Business Benefits

Reduce paperwork

User-friendly navigation

Customisation to reflect company brand

ITS Conversions

Improve real-time data visibility across the business

Enable quick and accurate completion of processes

Application Features

PreBilt offers enhanced features, compared with the standard SAP mobile solution.

Device Agnostic

Applications work on most mobile devices including smartphones, barcode data capture terminals, tablet and ruggedised mobile devices .

Barcode Scanning

1D – GS1, SSCC
2D – Datamatrix

Media Support

The software enables users to play and save supporting documents such as PDFs, product images and training videos.

GPS

Device integration with Google Maps allows stock to be tracked from dispatch through to delivery.

Image Capture

Functionality to capture photographic evidence to record discrepancies, damaged goods and comments.

Multi-language

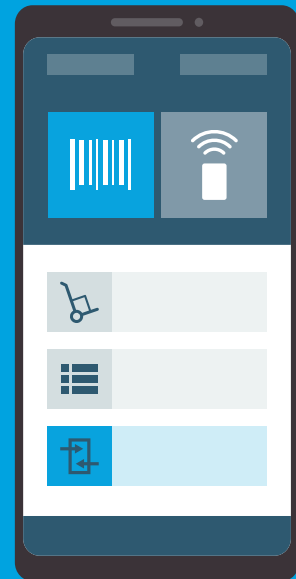

The applications can be translated into any language to enable them to be deployed globally across various users.

Sign-on Glass

Offer document authorisation and electronic proof of delivery through the mobile application.

Warehouse Blackspot Support

The applications can be used when there is temporary loss of connection to ensure data can still be collected or inputted in warehouse blackspots or areas with intermittent network access.

CodingControl

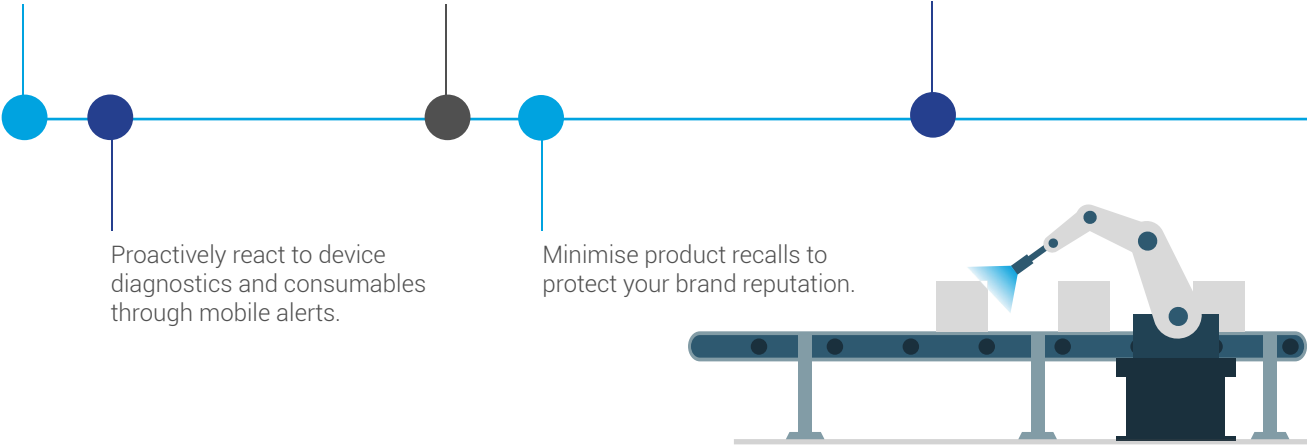

Eliminate costly barcoding and labelling errors with CodingControl™, our SAP Certified, easy to install solution. A proven way to integrate your production line coding and labelling devices directly into SAP.

With CodingControl you can:

Eradicate the cost of errors caused by manual data entry or incorrect template selection.

Achieve significant production cost savings through reduced product waste and recalls, increased production efficiency and improved Overall Equipment Efficiency (OEE).

Boost quality assurance and audit traceability.

IDoc Management Console

Our SAP certified IDoc Management Console provides instant visibility of transactions from external systems within SAP, allowing you to manage and analyse end-to-end data flow throughout the business.

The solution allows instant access to IDocs through a simple user interface, with any failed IDocs instantly flagged up without the need to view several transactions.

Benefits

Full Integration

Works with any SAP module including SCM, SD, QM and FI

Easy to Use

Centralised dashboard pulls all information into one simple and intuitive interface

Configurable

Can be configured so that an operator only sees the information relevant to them

Functionality

View performance statistics, audit trails and reprocess or reset status

Quick Reactions

Quickly and easily monitor performance statistics and resolve errors

Innovative Integration Solutions

We bring a different way of thinking to deliver intelligent integration with SAP.

Hardware Device Integration

- Advice on the correct level of integration
- Ensure data exchanged with SAP is useable and delivers benefits
- Monitor hardware and trigger alerts to users on mobile devices

Automation Integration

- In-depth knowledge of EWM MFS functionality
- Automation with WM replicates the benefits of MFS
- Innovative configuration to provide robust, real-time connection
- Direct connection to SAP

RFID Integration

- Collaborative working to develop RFID Proof of Concepts
- Solutions to go beyond scanning a pallet for stock ID and movement
- Configure logic to identify direction of travel
- Bespoke RFID solutions for individual customers' needs

Voice Technology Integration

- Connect voice-activated technology to SAP in real-time
- Customers adopting voice technology gain operational benefits:
 - Instant record of completed tasks
 - Reduced device damage
 - Language and accent recognition
 - Quantifiable worker productivity and accuracy gains
