# Orchestrate SAP changes through business-critical systems with automation

Successfully managing diverse SAP environments is business critical. Yet change management is often carried out in a combination of error-prone manual spreadsheets and automation technology that is too limited for large enterprises.

ActiveControl orchestrates and accelerates the processes involved in changing SAP ECC, SAP S/4HANA and SAP BTP, while providing a range of security measures that protect against change failure. You can use ActiveControl to manage multiple SAP systems in parallel, while embedding a series of checks and governance controls that ensure business operations are the first priority.

Whether you're making small everyday changes or undertaking large transformation projects, use ActiveControl to take on the heavy lifting in change management. Feel confident that your SAP projects will be delivered on time, every time, while protecting your critical operations.

Our products are used by the world's leading enterprises:

> " *Since working with Basis Technologies, we have been able to significantly reduce business downtime when making changes in our SAP environment. Prior to ActiveControl, we were managing transports on spreadsheets, which meant mistakes were made and business downtime was the result. Today, these issues are non-existent.*"
>
> *Jason Wierek, SAP Environment Manager, Molson Coors Beverage Company*

Automated Deployment

▶ Automatically import SAP transports after approval instead of relying on manual intervention.

▶ Orchestrate deployments so cross-system dependencies and activities are all automatically managed by ActiveControl.

Automated Sequencing

▶ Get transports in the right order by automatically managing overtakes, overwrites, and dependencies.

▶ Automatically sequence SAP transports based on the release date and time to guarantee consistency between production, development and test import.

Toolchain Integration

▶ Integrate your SAP systems with your non-SAP software, like Jira, ServiceNow, GitLab, Onapsis, and more.

▶ Plug any gaps with automation and remove delays, inconsistencies, and errors from your change management workflows.

Multi-System Management

ActiveControl

> " When developers are manually inputting the same code into multiple tracks, you can never expect that it will be 100% perfect. By automating our deployment methodology and the code merge process, we have helped to reduce all these issues."
>
> *Uday Poranki, Domain Lead, Ericsson*

ERICSSON

Multi-Track Development

- Manage change contention and remove overwrites, overtakes and regression scenarios across parallel landscapes (including N+1 or N+N environments).
- Conduct major transformations including on-prem to private cloud (or hybrid), HANA DB and S/4HANA with confidence that relevant changes are distributed and kept in sync throughout.

Automatic Merge

- Automate change synchronization and eliminate more than 80% of manual re-keying, reducing resource costs and downtime due to human error.
- Receive guidance on which changes can be merged without intervention.

Go-Live

- Eliminate disruption to business operations with ActiveControl's range of features that simplify and de-risk the go-live process.
- Accelerate production go-live by automating complex activities and reducing downtime.

Quality Control

ActiveControl

> " When something goes wrong and you have the company's eyes on you, you're approaching the fix from a place of anxiety and this can cause you to make even more mistakes. The confidence ActiveControl gives to those who implement it eliminates this anxiety by preserving your systems in a safe state with every change, so when something does happen, you can revert to that state and protect your business."
>
> **Dave Webb, SAP Development Lead, Watches of Switzerland**

75+ Analyzers

▸ Leverage analyzers that check on approvals, object failure, conflict management, import order and more.

▸ Catch potential issues missed during manual intervention, allowing you to deliver changes with confidence that all due diligence has been covered.

Approvals & Audits

▸ Assign approvers to the key points of the process and automate approvals for the less critical stages.

▸ Track every movement of your changes, including approvals, so you can instantly generate audit-ready reports.

Backout

▸ Avoid unnecessary downtime with the unique ability to roll-back changes from production in minutes.

▸ Restore production systems to their pre-import state, reversing your changes immediately without having to re-develop, test and approve fixes.
