

Proceed Rightsizer enables SAP customers to optimise their data volumes in preparation for a move to a hyper-scaler platform

Getting the sizing correct first time round will have a long-lasting cost impact

## Product Features

### Data overview

Proceed Rightsizer provides an overview of your SAP system and data can be broken down by:

- Modules
- Age of Data
- Company Code
- Sales Org
- Purchasing Group
- Plant etc
- Combinations of above

### Data analysis and actions

It provides answers to the following questions and this forms the actions to be taken to streamline your migration:

- What can be deleted?
- What are the easiest tables to archive?
- What archive objects to use?
- What is the minimum size I can get my database to if I only delete vs. delete and archive?

### Data forecast

Proceed Rightsizer allows for a growth forecast to indicate future data volumes, based on historic trends.

This is ideal for planning, budget setting and determining performance risks going forward.

### Rightsizing in action

One of the largest tyre manufacturers used Proceed Rightsizer in preparation for their move to SAP HANA®.

Original database size:

25 TB

Legacy data deleted:  
7.0 TB

Data archived:  
15.5TB

Data left to migrate to HANA:

2.5 TB

=

90%

Reduction in data volume

\$5.9M

Savings in hardware costs

## Key Stats
