TURNKEY

EXTENDING
ENTERPRISE IGA TO SAP

With SAP IdM and the current version of GRC sunsetting at the end of 2027, now is the time to invest in an enterprise Identity Governance and Administration (IGA) solution that can cover all applications in your estate, both inside and outside SAP.

Having delivered successful outcomes on SAP Security and IAM deployments for more than 20 years, Turnkey is uniquely positioned to help you achieve Digital Enterprise Resilience with an integrated approach to enterprise IGA that reflects the importance of SAP to your business.

THE INTEGRATED WAY FORWARD

Why Enterprise IGA for SAP?

Connecting SAP and non-SAP identity management in one solution allows you to govern identity and access enterprise-wide through a single pane of glass.

→ Improve compliance and reduce overhead by bringing all applications together for centralised access, controls, and policies.

→ Unlock business efficiencies by connecting your workforce to appropriate access, wherever and however they work.

→ Enhance privilege visibility and gain access utilisation insights.

→ Optimise security by implementing appropriate access controls and restricting risky access across your estate.

→ Manage both on-premise and cloud systems simultaneously, accelerating your transition to the cloud without blind spots.

How Turnkey Can Help

Your approach to enterprise IGA deployment should be as unique as your business. Turnkey can help you navigate the journey from start to finish, including:

→ Assess your current processes through stakeholder engagement and document review.

→ Devise a strategy, target operating model, and business case for enterprise IGA deployment.

→ Guide vendor selection and negotiate on your behalf.

→ Implement your strategy and preferred enterprise solution across SAP and all other applications in your estate.

→ Enable effective collaboration between SAP and identity teams.

→ Optimise your IGA solution continuously through our managed service.

BENEFITS TO YOUR BUSINESS

Align your identity strategy to business needs and goals

Achieve compliance with better access visibility

Improve user experience and streamline application onboarding

Boost process efficiency in provisioning and compliance

Modernise your estate with automation and centralised governance
