

Accelerated Archiving

Automated archiving of SAP data and documents to improve system performance, reduce risk, and lower the TCO of SAP systems

Organizations with large volumes of data and documents can use archiving to improve system performance, reduce risk, and lower the total cost of ownership (TCO) of SAP systems. However, organizations can be reluctant to start archiving if they have to dedicate expert resources to such “housekeeping” tasks. Serrala Accelerated Archiving takes the manual effort out of archiving by completely automating the configuration, running, and long-term management of archiving tasks for ECC and BW systems. With Serrala Accelerated Archiving organizations can move static data out of SAP systems to support strategic objectives, increase the speed of transactions and reporting; comply with data retention policies; and reduce operating costs. How does the security check work?

Quickly Configure, Review & Run Archiving Variants

Serrala Accelerated Archiving enables users to configure an organization’s unique ECC or BW archiving requirements from a single application. Users can specify system-wide and object-specific archiving requirements in one simple configuration window, which makes it easy for IT staff or archiving leads to capture and define archiving requirements and for executives to review and approve the archiving approach.

The solution generates the necessary archiving variants based on the approved configuration and schedules the variants to run in the correct order to maintain data integrity. By automating these archiving tasks, valuable IT and business resources can be reallocated to other more strategic business needs.

The solution generates the necessary archiving variants based on the approved configuration and schedules the variants to run in the correct order to maintain data integrity. By automating these archiving tasks, valuable IT and business resources can be reallocated to other more strategic business needs.

Support Multiple Archiving Strategies

The solution supports different archiving strategies so organizations can choose to take a more conservative or aggressive archive approach depending on needs. It supports:

- **Comprehensive archiving:** Archive large volumes of static and business complete data to immediately reduce data volume and improve system performance or “catch up” on neglected archiving tasks and meet data retention requirements.
- **Targeted archiving:** Archive data for specific periods, company codes, or data types to address specific business needs such as discontinuing product lines, vendors, or business units; carving out data to support organizational changes; or decommissioning legacy systems.

With Serrala Accelerated Archiving organizations can use archiving for more than just “housekeeping”. They can support strategic goals for growth, consolidation, and modernization.

Easily Monitor Archiving Progress

The solution provides a complete audit trail so managers can see exactly which archiving variants have been run and what data has and has not been archived.

Managers can use this to ensure that corporate archiving strategy is followed consistently, so their organizations can start to benefit from archiving even if there are limited IT resources or outsourced IT service providers.

Why Serrala

Serrala has over 20 years of experience in data archiving and our solutions are used by the largest and most successful companies running SAP systems.
